Table A3 — The margins over the whole period, 1997–2024

	Average marginal effect on leaving, percentage points		
	LPM	Logit	Probit
	(1)	(2)	(3)
Full-year contract	-12.09***	-10.42***	-9.93***
	(0.24)	(0.20)	(0.19)
Part-time contract	+8.13***	+4.16***	+4.55***
	(0.39)	(0.21)	(0.22)
Employer pension plan	-3.65***	-3.03***	-3.07***
	(0.26)	(0.20)	(0.20)
Public sector	-1.07***	-1.22***	-1.37***
	(0.24)	(0.20)	(0.20)
New baby during the year	+5.72***	+4.61***	+4.53***
	(0.58)	(0.41)	(0.42)
Child under 6	+0.49*	+0.70**	+0.59**
	(0.26)	(0.31)	(0.30)
Master's degree or higher	-0.36**	-0.60***	-0.57***
	(0.18)	(0.18)	(0.18)
Year fixed effects	Yes	Yes	Yes
Observations	84,146	84,146	84,146

Notes: Entries are percentage points: −9.93 means a 9.9-point lower annual probability of leaving teaching. Sample: all teachers with a bachelor's degree or higher, aged 18–70, in the pooled March supplements of 1998–2025 (outcomes over calendar years 1997–2024); one observation per person and year, $N = 84{,}146$. Controls beyond those shown: number of children, married, separated or divorced, age, age^2, female and Black. Health, disability and household-income controls exist only from the 2019 supplement and belong to the 2019–2025 full specification (Tables A1–A2); on that window they leave these margins essentially unchanged. Robust standard errors in parentheses (delta method for the logit and probit marginal effects). * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$.
